Larry R. Dalton

Professor of Chemistry 1976-1981

Leader, Innovator, Research Director

Recent Advances in Nonlinear Spectroscopy and Nonlinear Optical Materials, *Journal of Physical Chemistry*, **97**, 2871 (1993).

Professor Dalton's research focused on the emerging field of organic electroactive materials and on the development of saturation transfer spectroscopy and its application to biomaterials. This work was the basis for the hybrid electro-optic technology he developed in his subsequent career.
